

Dr. Junjun Ding, Ph.D., Assistant Professor

ADDRESS

Materials Science and Engineering,
New York State College of Ceramics,
Alfred University,
2 Pine St, Alfred, NY 14802

Phone: (607) 871-2446
Email: dingj@alfred.edu

EDUCATION

STEVENS INSTITUTE OF TECHNOLOGY

Hoboken, NJ, USA

Ph.D. in Mechanical Engineering (May 2017)

- Dissertation Title: Nanofabrication and Nanopatterning of Carbon Nanomaterials for Flexible Electronics
- Advisor: Dr. Frank T. Fisher
- Co-advisor: Dr. Eui-Hyeok Yang

UNIVERSITY OF SCIENCE AND TECHNOLOGY OF CHINA

Hefei, China

M.S. in Mechanical Engineering (June 2010)

- Master Thesis: Research of Femtosecond Laser Micro Fabrication of Functional Micro Devices and Applications
- Advisor: Dr. Wenhao Huang

B.S. in Mechanical Engineering (June 2007)

B.S. in Business Administration (June 2007)

PROFESSIONAL EXPERIENCE

ASSISTANT PROFESSOR

Aug 2017 - Present

- Materials Science and Engineering, New York State College of Ceramics at Alfred University, Alfred, NY,

GRADUATE RESEARCH ASSISTANT

2010 - 2017

- Department of Mechanical Engineering, Stevens Institute of Technology, Hoboken, NJ,

RESEARCH EXPERIENCE

ALFRED UNIVERSITY

Alfred, NY

- *Growth mechanism of two-dimensional nanomaterials,*
- *Highly stretchable electrodes with one-dimensional and two-dimensional nanomaterials,*
- *Flexible energy storage including supercapacitors and batteries*
- *Additive Manufacturing for scalable nanomanufacturing – inkjet printing, direct ink writing*

STEVENS INSTITUTE OF TECHNOLOGY

Hoboken, NJ

- *Vibration energy harvesting of circular polymer membranes*
 - Designed and constructed a vibration modes testing system for beams and circular membranes.
 - Analyzed vibration of beams and membranes using numerical models and theoretical methods, which was applied in designing and optimizing polymer membrane vibration energy harvesters.
- *Laser interference lithography from system to applications*
 - Rebuilt Lloyd mirror laser interference lithography system and two-mirror large-area exposure optical system.
 - Developed a model for laser interference lithography moiré patterns simulation using MATLAB, with model verified with experiment results. This work facilitates design to fabrication of wafer-scale periodic nanopatterns for surface-enhanced Raman spectroscopy (SERS).
 - Designed and built novel optofluidics waveguide platforms by using superhydrophobic surfaces. The results demonstrated that trapped air in the silicon nanostructures significantly reduced power loss from 6.8 dB/cm to 1.7 dB/cm at the incident angle of 10 degree.
- *Functional graphene for flexible electrodes*
 - Developed chemical vapor deposition (CVD) recipes of monolayer graphene, vertically aligned carbon nanotubes (VACNTs), and transition metal dichalcogenide (TMD) monolayers.
 - Pioneered the field of fabrication of graphene nanostructures by using laser interference lithography (LIL) technique, with down to 20 nm neck width achieved. The results bear significant merit for advancing large-scale fabrication of graphene nanomesh and nanodots. (Designated as “Most Read” article in the journal).
 - Fabricated and characterized corrugated graphene sheets on polydimethylsiloxane (PDMS) substrates for flexible and stretchable electrodes. It was shown that the maximum achievable strain prior to a change in electrode resistance increased from 8% for the flat graphene sheet to 15% for the corrugated graphene electrode. (Editor’s Pick, Designated as “Most Read” article in the journal)
 - Designed and manufactured cutting-edge graphene-CNT hybrid 3D structures with continuous, undamaged structures using the chemical vapor deposition method. This hybrid structures exhibit high electrical conductivity with tensile strain up to 300%. The 3D hybrid structures are promising for high performance stretchable electrode for flexible electronics and high-speed energy storage applications.
 - Developed large-scale flexible supercapacitors made by vertically aligned CNTs embedded in PDMS substrates. The supercapacitor shows consistent capacitance under bending angle varying from 0 to 180 degree.
- *Nanoconfined Polymer Electrolytes for Rechargeable Thin Film Lithium-ion Batteries*
 - Analyzed nanoconfinement of solid polymer electrolytes with cylindrical and trench-like (grating) nano-templates using both laser interference lithography and electron-beam lithography, with controllable feature sizes ranging from ~200 nm to as small as ~20 nm.
 - Designed and fabricated thin film lithium-ion batteries with the nanoconfined solid-state polymer electrolytes.
- *Rapid prototyping for Senior Design projects and course of Advanced Additive Manufacturing*
 - Trained and mentored 25 groups of senior undergraduate students to use 3D printer for Senior Design prototyping for 3 years.

- Reviewed students' design and carried 3D printing of the objects for prototyping and the analysis of print quality in the course of Advanced Additive Manufacturing.
- Analyzed failure of the additive manufactured plastic and metal components.

BROOKHAVEN NATIONAL LABORATORY

Upton, NY

Guest Researcher, Center for Functional Nanomaterials

2013 - 2015

- *Large-area nanofabrication for porous metallic alloy nanostructures*
 - Created a structure fabrication process for porous metallic alloy nanostructures using laser interference lithography, O₂ plasma etching, reactive ion etching (RIE), inductively coupled plasma (ICP), metal thin film depositions by e-beam evaporation and sputtering.
 - Characterized photoresist, silicon, and metal nanostructures using atomic force microscopy (AFM), scanning electron microscopy (SEM), and energy dispersive x-ray spectroscopy (EDX).
- *Wavelength dependence of large area (CVD) graphene based photo-detectors*
 - Designed a device to tune the strain applied on graphene and developed its fabrication process consisting of photolithography, e-beam lithography (EBL), RIE, and thin-film deposition by e-beam evaporation.
 - Characterized the electric and photoresponse of a suspended graphene monolayer in a field-effect transistor (FET) with an optically focused laser beam and a probe station.

UNIVERSITY OF SCIENCE AND TECHNOLOGY OF CHINA

Hefei, China

Graduate/Undergrad Research Assistant, Micro/Nano Engineering Laboratory

(2006 - 2010)

- *Femtosecond laser micro 3D fabrication for functional devices*
 - Built and maintained a custom femtosecond laser two-photon fabrication and control system.
 - Fabricated micro lens arrays using self-built femtosecond laser micro fabrication and control system. This process method significantly improved the surface roughness for additive micromanufacturing.
 - Improved the resolution of femtosecond laser two-photon polymerization by optimized 3D annular phase filter. Compression ratio of 20.8% for aspect ratio and 24.3% for axial size was achieved.
 - Analyzed the completely inelastic collision of microspheres and optical microrotor driven by optical tweezers theoretically and experimentally.
 - Investigated two-photon induced multi-dimensional data storage by the surface deformation formation with bit size of 4 μm.

TEACHING EXPERIENCE

ALFRED UNIVERSITY

Alfred, NY

Assistant Professor, Materials Science and Engineering

(Aug 2017 - current)

- *MECH 417 Introduction to Finite Element Analysis (3 sections):*
 - Senior level required course for Mechanical Engineering students covers the use of the finite element method to solve problems in the areas of stress analysis, heat conduction, and fluid flow including weighted residual and variational approaches, shape functions, numerical integration, and the patch test. The focus of the class is teaching the fundamental finite element analysis theory and methods which are discipline and software independent. Examples of these finite element modeling and

analysis are demonstrated in a number of areas, including solid and fluid mechanics, thermodynamics, and heat transfer. Several software packages, including finite element analysis and CAD software, are used in class.

- *CEMS 446 Mechanics of Composites (2 sections):*
 - Senior level required course for Materials Science and Engineering students covers the fundamentals in composite materials, manufacturing, the mechanical properties of composites, and their applications. The focus of the class is teaching the fundamental mechanical properties of composites, including micromechanical and macromechanical relationships of the current and future composite materials.

STEVENS INSTITUTE OF TECHNOLOGY

Hoboken, NJ

Teaching Assistant/Guest Lecture

(2010 - 2017)

- *Courses:*
 - ME 345 Modeling and Simulation
 - ME 361 Design of Machine Components
 - ME 491 Manufacturing Processes and Systems
 - ME 515 Automotive Engineering
 - ME 566 Design for Manufacturability
 - ME 631 Mechanical Vibrations I
 - ME 652 Advanced Additive Manufacturing
 - ME 665 Advanced Product Development
 - ME 423/424 Senior Design
 - ME 800 Special Problems in Mechanical Engineering
- Created and designed class lectures and discussions based on textbooks, and supported professors on grading assignments and exams.
- Gave lectures to undergraduate and graduate level courses (ME 631 Mechanical Vibrations I, ME 652 Advanced Additive Manufacturing).
- Coordinated over 25 senior design groups per semester with additive manufacturing technology for rapid prototyping and organized their presentations and demonstrations for 3 years (ME 423/424 Senior Design).
- Reviewed students' design and carried 3D printing of the objects for prototyping and the analysis of print quality (ME 423/424 Senior Design, ME 652 Advanced Additive Manufacturing).
- Trained undergraduate groups on the use of vibration testing setup and material testing instruments.
- Trained undergraduate and graduate internal and external users on the use of micromanufacturing instruments in Micro Device Laboratory.
- Trained undergraduate groups on the use of vibration testing setup and material testing instruments.

UNIVERSITY OF SCIENCE AND TECHNOLOGY OF CHINA

Hefei, China

Teaching Assistant

(2008 – 2010)

- *Courses:*
 - Intro to Nano Technology
 - Mechatronics

SERVICES

STUDENTS MENTORING AT ALFRED

- Chao Liu, PhD student, Materials Science and Engineering. “Additive Manufacturing of Nanocomposites”, Jan 2018 - present

STUDENTS MENTORED AT STEVENS

- Chao Liu, MS student, Mechanical Engineering. “Growth of Carbon Nanotubes and Graphene with APCVD and LPCVD Systems”, 2017
- Kun Tang, MS student, Mechanical Engineering. “Monolayer Graphene Growth by Low Pressure Chemical Vapor Deposition and Its Characterizations”, 2017
- Jiannan Zhao, MS student, Mechanical Engineering. “Large Single-crystal Graphene Growth on Pt”, 2016
- Zachary Binger, Junior year undergrad, Mechanical Engineering. “Monolayer Graphene Growth with LPCVD”, 2015
- Yuki Osumi, Senior High School Student, Academy for the Advancement of Science and Technology at Bergen County Academies. “Exfoliation of Graphene Patterns”, 2015

GRADUATE STUDENT COMMITTEES AT ALFRED

- Andres Garcia, MS student, Mechanical Engineering. “3D Printing of Ceramics”, Advisor: Xingwu Wang
- Andrew King, MS student, Materials Science and Engineering. “Investigation into the Synthesis of a Stoichiometrically Controlled Alloy of Nickel and Titanium”, Advisor: Steven Tidrow
- Yiyu Li, PhD candidate, Materials Science and Engineering. “Study on Consolidation of Sulfide-Based Infrared Optical Ceramics”, Advisor: Yiquan Wu

OTHER SERVICES

- 2017 Panelist in Materials Engineering, NSF Graduate Research Fellowship Program (GRFP)
- 2017 Guest Editor, Elsevier Journal *Nano-Structures & Nano-Objects* (NANOSO)
- 2017 Session Co-organizer, “Micro and Nano Systems for Biological and Biomedical Applications”, 2017 ASME International Mechanical Engineering Conference and Exposition (IMECE), Oct 3 – Oct 9, Tampa, FL
- 2015, 2016, 2017 Program Committee for the 59th, 60th, 61th *Conference on Electron, Ion, and Photon Beam Technology and Nanofabrication* (EIPBN)

HONORS AND AWARDS

- 2017 Research Discretionary Funding, Alfred University, \$20,000
- 2016 Stevens Ph.D. Conference Funding (among six recipients institute wide)
- 2016 National Science Foundation (NSF) for the American Society of Mechanical Engineers (ASME) Travel Award
- 2014, 2015 EIPBN Student Travel Grant (2014, 2015)
- 2014, 2015 Stevens Graduate Conference Fund (2014, 2015)
- 2016 *Journal of Vacuum Science and Technology B* paper recognized as one of the “MOST READ” articles in the journal (October 2016)
- 2016 *Journal of Vacuum Science and Technology B* paper featured as an “Editor's Pick” on the JVST website (September 2016)
- 2014 *Journal of Vacuum Science and Technology B* paper recognized as one of the “MOST READ” articles in the journal (October 2014)

MEMBERSHIP

- Member of the American Society of Mechanical Engineering (ASME)
- Member of the American Vacuum Society (AVS)
- Member of the Materials Research Society (MRS)
- Member of the New York Academy of Sciences (NYAS)
- Member of the Stevens-Society of Plastic Engineering (SPE) student chapter
